

(Textile Engineering Department)

Graduate

---

Course Title: **Experimental Design & Statistical Research Methods**

Lecturer: **Dr. Nazanain Ezazshahabi**

---

**Course Topics:**

<ul style="list-style-type: none"><li>• Empirical sciences - Error sources - Precision and accuracy concepts - Experimental approach to error-engineering view to statistics</li></ul>
<ul style="list-style-type: none"><li>• Representative of the population - Statistical population - Average - Weighted average -Mode and median</li></ul>
<ul style="list-style-type: none"><li>• Standard deviation - Distribution - Frequency distribution curve - Cumulative distribution curve - Methods for achieving probability distribution of population - Introduction of Gaussian distribution - Gaussian logarithm distribution - Null hypothesis</li></ul>
<ul style="list-style-type: none"><li>• Sample size - Sample population - Population mean confidence - Random variable Average sampling - Average sampling distribution -Central limit theorem</li></ul>
<ul style="list-style-type: none"><li>• Effect of error propagation on accuracy of estimation of mean-Mathematical relations of random error propagation</li></ul>
<ul style="list-style-type: none"><li>• Production and extraction of knowledge with significance tests - Detection of outliers (doubtful responses), Dixons test- The Chi-squared test</li></ul>
<ul style="list-style-type: none"><li>• Single-Factor Experiments with No Restrictions on Randomization (Analysis of variance rationale- tests on means-confidence limits on means-)</li></ul>
<ul style="list-style-type: none"><li>• General regression significance test</li></ul>
<ul style="list-style-type: none"><li>• After ANOVA tests( Contrast-Range test- Scheffe test- Tukey)</li></ul>
<ul style="list-style-type: none"><li>• Single-Factor Experiments-Randomized Block Design</li></ul>
<ul style="list-style-type: none"><li>• randomized complete block design</li></ul>
<ul style="list-style-type: none"><li>• Missing values, randomized incomplete block design</li></ul>
<ul style="list-style-type: none"><li>• Single Factor Experiments (Latin squares- Graeco latin squares-Youden )</li></ul>
<ul style="list-style-type: none"><li>• Factorial experiments design</li></ul>
<ul style="list-style-type: none"><li>• Qualitative and Quantitative Factors (linear regression, curvilinear regression- two factors, one qualitative, one quantitative- two factors, both quantitative)</li></ul>
<ul style="list-style-type: none"><li>• Taguchi Approach- Methods of reducing the number of experiments</li></ul>

**Reading Resources:**

- Fundamental Concepts in the Design of Experiments
- Practical Statistics for the Textile Industry
